EBU5403 Lab (Tutorial 1)

1. Aim

This assessment is to assess your understanding on the network with routers that configured with RIP, which includes examining your configuration on the routers and PCs, and your knowhow on network troubleshooting.

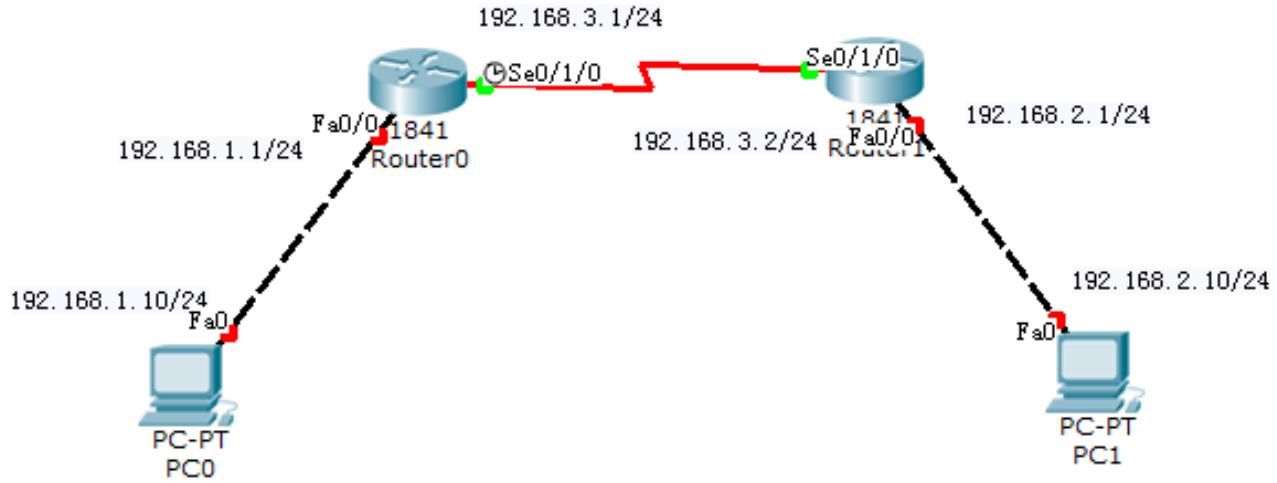

2. Instruction

- The lab will start on time for an hour – not time extension if you are late.
- You will be given an hour to finish the configurations of the routers, PCs and network.
- You are not allowed to discuss with other students during the lab.
- You are not allowed to bring any electronic equipment to the lab. Books, paper notes and printout are allowed.
- You will be given a network topology diagram and setup the routers and PCs in the Packet Tracer according to the given network diagram.
- All PCs in the lab are installed with Packet Tracer and you have to use the lab PC to setup the network in Packet Tracer.
- After an hour, you will need to leave the lab and wait outside the lab to be called for assessment.
- During the assessment, you need to answer questions in the given time.
- The questions are related to your network topology on Packet Tracer.

3. RIP LAB

3.1 Topology

The topology of this lab is shown below.

Task 1: Establish the network

PC Configure network for PCs

Host	IP address	netmask	gateway
PC0	192.168.1.10	/24	192.168.1.1
PC1	192.168.2.10	/24	192.168.2.1

Configure interfaces of routers

Router	Interface	IP Address	Netmask
Router0	fa0/0	192.168.1.1	/24
	se0/1/0	192.168.3.1	/24
Router1	fa0/0	192.168.2.1	/24
	se0/1/0	192.168.3.2	/24

Configure routes on routers

Router	Protocol	Advertised Network
Router0	RIP	192.168.1.0
		192.168.3.0
Router1	RIP	192.168.2.0
		192.168.3.0

Task 2: Check all network connections

- Use “Ping” to check the connections between PCs in different networks.
- Check configuration of interfaces on each router.
